Beni-Suef University Faculty of Science

Chemistry-Biochemistry Program specification

2023/2024

A- Basic Information

Program title	Chemistry-Biochemistry
Program type	Double
Department	Biochemistry
Coordinator	Dr. Asmaa Mohamed Mahmoud
External evaluator	Prof. Dr. Ali El Nenaey
Last date of program specification approval:	9/2023

البرنامج مصمم طبقا للائحة كلية العلوم بنظام الساعات المعتمدة بقرار وزارى رقم (4904) بتاريخ (2019/10/29)

B- Professional information

Overall aims of Program:

This program aims to:

- 1. Provide graduate with a wide range of integrated knowledge, concepts and theories of basic science to interpret in the field of Biochemistry, natural products chemistry and biotechnology.
- 2. Enable graduate students to gain the practical and laboratory skills required for experiments in Chemistry-Biochemistry field.
- 3. Master safe handling techniques of chemicals and natural products
- 4. Develop graduates with the skills of data collection, interpretation and presentationdata in English and Arabic.
- 5. Participate as a member in team, recognize and respect the team members, and areflexible for adaptation to work conditions.
- 6. Provide with certain skills for using the different biochemical tools to

acquire data and to have the ability for analyzing, interpreting and figuring out the results.

- 7. Provide graduate with skills of quality control processes evaluation, risk managementand time organization.
- 8. Provide graduate with skills and attitude necessary for lifelong and independent learning the ethics related to environment caring and community problems.
- 9. Demonstrate knowledge from an integrated point of view of theories, facts, concepts and essentials of chemistry and biochemistry.
- 10. Provide experience of current analytical techniques and practical skills relevant tochemistry-biochemistry and appropriate for employment.

2- Intended learning outcomes of course (ILOs)

The Program provides excellent opportunities for students to demonstrate knowledge and understanding qualities and develop skills appropriate for Bachelor of sciences in Chemistry- Biochemistry.

A- Knowledge and understanding:

By the end of this program the student should be able to:

- **A1.** Recall the influence of chemistry and biochemistry, professional ethics, andregulatory bodies in professional practice.
- **A2.** Recall the importance of Arabic and English languages in professional practice.
- **A3.** Define chemical structure, stereo chemical aspects, physicochemical properties and principles of chemical reactions.
- **A4.** Define fundamental terminology and classification systems used in basic science.
- A5. Explain concepts, principles and theories related to basic science.

<u>Program specification</u>

(Academic year 2023/2024)

- **A6.** Describe knowledge and comprehension of the theories, concepts and techniques related to aromatic, environmental, nuclear, inorganic and spectroscopic studies of chemistry.
- **A7.** Outline the principles of isolation, purification, as well as qualitative and quantitative analysis.
- **A8.** Describe the relationship of chemical and molecular structure of metabolic components with mechanisms of actions, biological activities, concepts of informatics and designing and targeting of biological components.
- **A9.** Explain key metabolic reactions involved in the biosynthesis and degradation of biological molecules.
- **A10.** Understand the basic knowledge of the molecular biosciences, including biochemical processes, genetics, molecular biology and cell biology.
- **A11.** Recognize the relevance of biochemistry, molecular biology, immunology, microbiology and toxicology to disease states, diagnosis and therapeutics.
- **A12.** Name the principles of public health issues such as laboratory diagnosis of diseases.
- **A13.** Recall the principles and techniques of compounding, manufacturing, biotechnology, and packaging of chemicals products.
- **A14.** Memorize sterilization processes as well as quality control and assurance terms and procedures in the biochemistry and chemistry lab.
- **A15.** List the basis of toxicity profiles of drugs/xenobiotic including source identification, symptoms, first aid measures and management.
- **A16.** Identify the principles of thermodynamics and quantum mechanics including their applications in chemistry.

B- Intellectual skills

By the end of this program the student should be able to:

- **B1.** Evaluate knowledge and understanding of essential concepts, principles and theories related to the studied basic science.
- **B2.** Interpret qualitative and quantitative scientific data relevant to the various subjects of chemistry and biochemistry.
- **B3.** Evaluate data-processing skills, relating to chemical and biochemical information data.
- **B4.** Deduce mechanisms and procedures for chemical and biochemical problems basedon critical thinking.
- **B5.** Distinguish between different metabolic pathways.
- **B6.** Decide the appropriate isolation and purification methods of active substances from natural and synthetic origin.
- **B7.** Generate and adopt the appropriate methods of synthesis, identification, and standardization of active substances from natural and synthetic origins.
- **B8.** Examine the different mechanisms of transcriptional, posttranscriptional and translational control of gene expression in prokaryotes and eukaryotes.
- **B9.** Recognize signs, symptoms and risk factors that relate to medical or health problems that fall into the scope of practice of other healthcare professionals.
- **B10.** Analyze literature, research skills, scientific thinking and statistics to enhancepractice-related activities.
- **B11.** Contrast the role of oncogenes and tumor suppressor during the normal cellgrowth and carcinogenesis process.
- **B12.** Interpret immunological and molecular reports.
- B13. Organize of experimental work in molecular research laboratories.
- **B14.** Critically evaluate their own research data and develop new approach to solving their research questions.

C- Professional and practical skills

By the end of this program the student should be able to:

- **C1.** Measure the distinctive chemical properties of solutions and recognize the function of blood buffers and read a blind gases report
- C2. Perform some chemical tests to identify different carbohydrates, lipids and proteins.
- **C3.** Observe a demonstration for chromatography and electrophoresis techniques and use them to separate different chemical compounds.
- **C4.** Practice the use of laboratory equipment as pipettes, spectrophotometer andcentrifuges.
- **C5.** Demonstrate animal dissection.
- **C6.** Interpret biochemical calculations for normality and molarity.
- C7. Apply buffer preparation and chemical and biological components determination.
- **C8.** Apply spectrophotometer to determine the biological components contents.
- **C9.** Apply Colorimetric assays to determine lipid, kidney, liver, heart and electrolytesprofile.
- **C10.** Apply the safety precautions in chemistry and biochemistry labs (includes handling of samples and chemicals and General Housekeeping).
- C11. Apply appropriate method to determine purity and integration of nucleic acidsuch as spectrophotometric method and agarose electrophoresis.
- C12. Practice and perform the techniques of molecular biology including applying DNA and RNA isolation techniques such as Solvent extraction and spin column extraction.
- C13. Conduct standard laboratory procedures involved in analytical and synthetic work.

- C14. Apply computational tools and packages, to prepare technical reports and to usescientific literature effectively.
- C15. Extract, isolate and purify active substances from different sources.
- **C16.** Develop and assess novel methods of analysis.
- C17. Develop advantageous analytical method over the existing traditional techniques

D- General and transferable skills

On successful completion of the Chemistry-Biochemistry Program, students will be ableto:

- **D1.** Illustrate interpersonal skills, manage time, critical enquiry and self-learning skills.
- **D2.** Address the community linked problems with considerable attention to the communityethics and traditions.
- **D3.** Debate the scientific data in Arabic and English.
- **D4.** Apply problem-solving skills, relating to qualitative and quantitative information.
- **D5.** Investigate the thinking independently, set tasks and solve problems on ethical scientific basis.
- **D6.** Develop life-long learning and solve the community-linked problems.
- **D7.** Deal with property rights legally and ethically.
- **D8.** Exhibit the sense of beauty and neatness.
- **D9.** Help students to work independently and as a part of a team and learn independently with open-mindedness and critical enquiry and Enhance self-learning skills.

3- Academic Standards

The Academic Reference Standards for the award of the B.Sc. degree in chemistry- biochemistry as well as the attributes and capabilities of the graduates were based essentially on the National Academic Reference Standards (NARS) published by the National Authority for Quality Assurance and Accreditation of Education (2010/2011) for chemistry- biochemistry branch.

These general attributes of graduates were based essentially on the National Academic Reference Standards (NARS) as following:

- 1. Demonstrate wide background knowledge related to the different branches of chemistry / biochemistry
- 2. Acquire the knowledge and experience of principles and procedures employed in standard chemical and biochemical analyses using specialized laboratory techniques.
- 3. Review and evaluate quality control processes, safety regulations, manage risks and organize time to finish jobs.
- 4. Plan and conduct experimental work, critically evaluate the outcomes, review and report on practice.
- 5. Demonstrate knowledge, from an integrated point of view, of theories, facts, concepts and essentials of chemistry and biochemistry.
- 6. Recognize the relationship and interactions among chemistry, bio-chemistry and the environment and abide by the legislations and ethics related to the environment preservation and human health and welfare.
- 7- Apply theories and concepts of mathematics and statistics to understand the underlying mechanisms of the essential chemical and biochemical processes.

In addition to the general attributes of the graduate of faculties of Sciences, the graduate of the chemistry / biochemistry program should be able to:

- 1.1 Recognize the role of basic sciences in the development of society.
- 1.2 Develop scientific approaches that meet community needs considering economic, environmental, social ethical and safety requirements.
- 2. 1. Demonstrate wide background knowledge related to the different branches of chemistry /biochemistry.
- 2.2. Have values and beliefs that are commensurate with the ethics of our Arab society and in line with its laws in force, and is committed to the ethics of scientific research.
- 3. Recognize the molecular and chemical basis of the processes that occur in cells and living organisms.
- 4. Recognize the relationship and interactions among chemistry, biochemistry and the environment and abide by the legislations and ethics related to the environment preservation and human health and welfare.
- 5. 1 Analyze the biochemical data to characterize biomolecules and evaluate the activity of biochemical processes.
- 5.2 Collect, analyze, and present data using appropriate formats and techniques and use information technology relevant to the field efficiently.
- 6. Use modern biotechnological sciences, skills, and computer aids to support the research anduses of chemistry and biochemistry.
- 7. Apply theories and concepts of mathematics and statistics to understand the underlying mechanisms of the essential chemical and biochemical processes.
- 8. Engage in research teams, especially multidisciplinary teams. participate in quality control and review processes, risk management and time management for job termination.

4- External references for standard (Benchmark)

Not applied.

6- Programmed Admission Requirements

Registration to the Faculty of Science requires the student to have the General Egyptian Secondary Education in Science Group Certificate or equivalent certificates or degrees approved by the Egyptian ministry of higher education with qualifying grades according to the guidelines put annually by the Ministry of higher education.

7- Regulations for progression and program completion

Rules related to course outlines are applied, along the 136 credit hours.

- **7-1.** Students must have a grade of 60% (1.0 GPA) or higher to pass each course. If the student fails a course (< 1.0 GPA), he/she must retake the course.
- **7-2.** Students must apply for and attend a minimum of six-weeks summer practical training in fields or laboratories of related companies: this should be proven by an official letter from the place of training. For some departments, this training may be done in the faculty facilities.
- **7-3.** The program is completed by at least two scientific fieldtrips, on which a scientific descriptive report must be submitted by each student.
- **7-4.** A student successfully completes the program only if he/she had accumulative grade of atleast 60% (1.0 accumulate GPA).

8- Assessment of program intended learning outcomes

8-1. Student assessment

Every student must attend, at least, 75 % of practical sections, which measured by attendancesheet and student log notebook that marked by administrator staffs and online learning teaching method also added

	Tool or method	ILOs
1-	Written	Knowledge and understanding and Intellectual skills
2-	Practical	Practical and professional skills
3-	Mid-term	Knowledge and understanding and Intellectual skills
4-	Student Activity	General and transferable skills
5-	Oral exam	Knowledge and understanding and Intellectual skills

Every course will be assessed for a weight of 100

Evaluation will be:

Theortical course only:

- 15% weightage (Mid- term exam in the 6^{th} week)
- 15 % weightage (Student activity throughout the term)
- 10% weightage (Oral examination in the 10th week)
- 60% weightage (Semester end written examination)

Practical course only:

- 10% weightage (Oral examination in the 10th week)
- 15% weightage (Mid- term practical exam in the 6 th week)
- 15 % weightage (Student activity throughout the term)
- 60% weightage (Semester end laboratory examination)

Theortical & Practical courses:

- 5% weightage (Mid- term exam in the 6 th week)
- 5 % weightage (student activity throughout the term)
- 10% weightage (Oral examination in the 10th week)
- 20% weightage (Semester end laboratory examination)
- 60% weightage (Semester end written examination).

9- Methods of program evaluation

No	Evaluator	Too	Sample
		l	
1	Senior Students	Questionnaire and open	70%
		Discussion	70%
2	Alumini	Meeting and	60%
		Questionnaire	0070
3	Stakeholders	Meeting and	Annrovimete semple
		Questionnaire	Approximate sample
4	External	Test reviews	All participants in the
	Evaluator(s)		program
5	Others	Personal interview	All participle program

- **4.** Provide experience of current analytical techniques and practical skills relevant to chemistry-biochemistry and appropriate for employment.
- **7.** Apply theories and concepts of mathematics and statistics to understand the underlying mechanisms of the essential chemical and biochemical processes.
- **5.** Participate as a member in team, recognize and respect the team members, and are flexible for adaptation to work conditions
- 6. Provide with certain skills for using the different biochemical tools to acquire data and to have the ability for analyzing, interpreting and figuring out the results.

كلية العلوم _ جامعة بني سويف

- **8.** Engage in research teams, especially multidisciplinary teams.
- participate in quality control and review processes, risk management and time management for job termination.
- **5.** Participate as a member in team, recognize and respect the team members, and are flexible for adaptation to work conditions.
- **8.** Provide graduate with skills and attitude necessary for lifelong and independent learning the ethics related to environment caring and community problems.

مصفوفة التوافق بين المعايير الأكاديمية لبرنامج الكيمياء والكيمياء الحيوية ونواتج التعلم المستهدفة من البرنامج

A-Knowledge and understanding

NARS (5)	Program ILOS (16)	Couse code
A. 1. Demonstrate knowledge and	A1. Recall the influence of chemistry	
comprehension of the theories, facts,	and biochemistry, professional ethics,	1001-002; 1001-003; 1002-005;
concepts, fundamentals and techniques	and regulatory bodies in professional	1002-006; 4243-058;; 3121-001;
related to the fields of chemistry and	practice.	2201-001; 2301-001; 2111-005;
biochemistry.	A3. Define chemical structure, stereo	2201-002; 2113-140; 2203-002;
	chemical aspects, physicochemical	2303-002; 2502-001; 2402-001;
	properties and principles of chemical	2602-001
	reactions.	

	A4. Define fundamental terminology	
	and classification systems used in	
	basic science	
A. 2. Acquire the essential knowledge	A2. Recall the importance of Arabic	1001-001; 1001-003; 1002-004;
in mathematics, physics, biology,	and English languages in professional	1002-005; 4135-142; 2605-002;
statistics and other collateral subjects	practice.	4224-049; 2504-002; 4704-050;
in order to understand the advanced	A5. Explain concepts, principles and	2304-003; 3124-004
and contemporary topics of chemistry	theories related to basic science.	
and biochemistry		
A.3. Exhibit familiarity with the	A6. Describe knowledge and	3124-004; 4233-012; 4224-051;
principles and procedures used in	comprehension of the theories,	4215-016; 4225-061; 4215-062;
chemical analyses as well as in	concepts and techniques related to	4216-015; 4246-010; 4703-048;

characterization and structural	aromatic, environmental, nuclear,	4703-049; 4218-032; 4228-057;
investigation of	inorganic and spectroscopic studies of	4248-066; 4218-040; 4235-026;
Compounds.	chemistry.	4235-063; 4243-011; 4224-049;
	A7. Outline the principles of	2201-001; 2203-002
	isolation, purification, as well as	
	qualitative and quantitative analysis.	
A.4. Characterize the chemical nature	A8. Describe the relationship of	4707-035; 4708-040; 4705-054;
and behavior of the functional groups	chemical and molecular structure of	2114-141; 4705-014; 4705-053;
in different types of molecules.	metabolic components with	4707-059; 4705-055; 4708-032;
	mechanisms of actions, biological	4708-038; 4248-066; 4704-052;;
	activities, concepts of informatics and	4706-057; 4707-030; 4706-019;
	designing and targeting of biological	4706-021; 4706-020; 4708-034;
	components.	4706-056; 4702-047; 4702-046;

involved in the biosynthesis and 4235-026; 4705-055; 4246-037; degradation of biological molecules A10. Understand the basic knowledge of the molecular biosciences, including biochemical processes, genetics, molecular biology and cell biology. A14. Memorize sterilization processes as well as quality control and assurance terms and procedures in the biochemistry and chemistry lab.

A9. Explain key metabolic reactions 4244-014; 4707-033; 4216-015;

4703-023

A11. Recognize the relevance of	4702-046; 4704-051; 4705-055;
biochemistry, molecular biology,	4707-027; 4707-036; 4703-048;
immunology, microbiology and	4703-049; 4703-023; 4708-038;
toxicology to disease states, diagnosis	4704-052; 4707-058; 4706-021;
and therapeutics.	4705-014; 4707-035; 4708-040;
A12. Name the principles of public	4702-046; 4702-047; 3123-003;
health issues such as laboratory	4218-040; 4248-066; 4218-032;
diagnosis of diseases.	4218-065; 4248-035; 4708-038;
A13. Recall the principles and	4703-023; 4217-042; 4217-054;
techniques of compounding,	4247-023; 4247-045; 4216-015;
manufacturing, biotechnology, and	4216-068; 4246-037; 4246-010;
packaging of chemicals products.	4244-014; 4215-016; 4233-012
A15. List the basis of toxicity profiles	
of drugs/xenobiotic including source	
	biochemistry, molecular biology, immunology, microbiology and toxicology to disease states, diagnosis and therapeutics. A12. Name the principles of public health issues such as laboratory diagnosis of diseases. A13. Recall the principles and techniques of compounding, manufacturing, biotechnology, and packaging of chemicals products. A15. List the basis of toxicity profiles

	identification, symptoms, first aid measures and management. A16. Identify the principles of thermodynamics and quantum mechanics including their applications in chemistry.	
	B- Intellectual skills

		4707-027; 4703-048; 4703-0491
		4218-065; 4248-035; 4708-038;
		4703-023; 4248-066; 4218-040
C.3. Solve problems related to the	C2. Perform some chemical tests to	4704-050; 4706-020; 4706-056;
fields of chemistry and biochemistry	identify different carbohydrates, lipids	4706-019; 4246-04; 4706-057;
using a	and proteins.	4703-023; 4705-055; 4706-056;
range of formats and approaches and	C6. Interpret biochemical calculations	4235-026; 4706-020; 4225-061;
employ appropriate techniques and	for normality and molarity.	4215-016; 4215-062; 4224-049;

tools in accordance with scientific	C7. Apply buffer preparation and	4244-014; 4224-051; 4243-011;
ethics.	chemical and biological components	4233-012; 2203-002; 2201-001
	determination	
C. 4. Employ standard laboratory	C3. Observe a demonstration for	1002-004; 2114-141; 2203-002;
instruments, procedures, and	chromatography and electrophoresis	4235-026; 4215-062; 4216-068;
techniques used in the chemical and	techniques and use them to separate	4235-063; 4218-065; 4247-045;
biochemical investigations.	different chemical compounds	4703-023; 4248-035; 4218-040;
	C8. Apply spectrophotometer to	4248-066; 4708-040; 4705-053;
	determine the biological components	2114-141; 4706-020; 4706-019;
	contents.	4705-055; 4708-038; 4248-066;
	C10. Apply the safety precautions in	4702-047; 4702-046; 4235-026;
	molecular biology labs (includes	4704-051; 4704-052; 4707-027;

	handling of samples and chemicals and	3121-001; 3123-003; 3122-002;
	General Housekeeping).	3124-004
	C14. Apply computational tools and	
	packages, to prepare technical reports	
	and to use scientific literature	
	effectively	
C. 5. Apply mathematical and	C13. Conduct standard laboratory	4243-058; 4244-014; 4224-051;
computational tools to analyze and	procedures involved in analytical and	4246-037; 4246-010; 4228-057;
interpret experimental data in terms of	synthetic work	4218-032; 4248-035; 4703-023
theories relevant to chemistry and		
biochemistry.		

C. 6. Read, scrutinize, and evaluate the validity and relevance of literature in a critical thinking approach.

C9. Apply Colorimetric assays to determine lipid, kidney, liver, heart and electrolytes profile.

C10. Apply the safety precautions in 3123-003; 3122-002; 3124-004; molecular biology labs (includes handling of samples and chemicals and General Housekeeping).

C14. Apply computational tools and packages, to prepare technical reports and to use scientific literature effectively

C15. Extract, isolate and purify active substances from different sources

4246-044; 4235-063; 4708-040;

4702-046; 4235-026; 4704-051;

4704-052; 4707-027; 3121-001;

4243-011; 4246-044; 4247-023.

C7. Consider variations inherent in	C11. Apply appropriate method to	4704-051; 4247-045; 4707-059;				
dealing with biological materials such	determine purity and integration of	4703-048; 4703-049; 4218-065;				
as	nucleic acid such as spectrophotometric	4217-042; 4704-052; 4244-014;				
sample size, accuracy, precision and	method and agarose electrophoresis.	4215-062; 4235-026; 4235-063;				
calibration.	C12. Practice and perform the	4216-015; 4246-037; 4246-044;				
	techniques of molecular biology.	4216-068; 4247-045; 4703-049;				
	C16. Develop and assess novel	4217-054; 4217-042; 4228-057;				
	methods of analysis	4218-032; 4218-065; 4248-035;				
	C17. Develop advantageous analytical	4708-038248-066; 4704-052;				
	method over the existing traditional	4218-040				
	techniques

عميد الكلية

مصفوفة التوافق بين مواصفات الخريج واهداف البرنامج مع نواتج التعلم المستهدفة بالبرنامج مع نواتج التعلم المتبناة من الهيئة مع المقررات الدراسية للبرنامج (الكيمياء والكيمياء الحيوية) [لائحة جديدة]

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
1.1 Recognize the role of basic sciences in the development of society. 1.2 Develop scientific approaches that meet community needs considering economic, environmental, social ethical and safety requirements.	1. Provide graduate with a wide range of integrated knowledge, concepts and theories of basic science to interpret in the field of Chemistry and Biochemistry, 5. Participate as a member in team, recognize and respect the team members, and are flexible for adaptation to work conditions.	A. 1. Demonstrate knowledge and comprehension of the theories, facts, concepts, fundamentals and techniques related to the fields of chemistry and biochemistry. B. 1. Discuss subject- related theories and assess their concepts and principles. C. 1. Plan and conduct investigations using appropriate techniques relevant to the fields of chemistry and biochemistry and write structural reports on the data in accordance with the standard scientific guide lines. D. 1. Use information and communication technology effectively.	A1. Recall the influence of chemistry and biochemistry, professional ethics, and regulatory bodies in professional practice. A3. Define chemical structure, stereo chemical aspects, physicochemical properties and principles of chemical reactions. A4. Define fundamental terminology and classification systems used in basic science. B1. Evaluate knowledge and understanding of essential concepts, principles and theories related to the studied basic science. C1. Measure pH of a solution and recognize the function of blood buffers and read a blind gases report C5. Demonstrate animal dissection. D1. Illustrate interpersonal skills, manage time, critical enquiry and self-learning skills.	3121-001; 2201-001; 2301-001; 2111-005; 2201-002; 1001-002; 1001-003 1002-005; 1002-006; 2203-002; 4243-058; 2502-001; 2402-001; 2602-001; 2302-002; 2131-140; 3123-003; 4224—049; 4224-051; 2504-002; 4706-056; 4705-014; 4707-058; 4707-030
2.1. Demonstrate wide background knowledge related to the different	1. Provide graduate with a wide range of integrated knowledge, concepts and theories of basic science to	A. 2. Acquire the essential knowledge in mathematics, physics, biology, statistics and other collateral subjects in	A2. Recall the importance of Arabic and English languages in professional practice. A5. Explain concepts, principles and theories related to basic science.	1001-001; 1001-004; 1002-005; 3121-001; 3123-003; 4704-050; 4224-049; 4135-142;

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
branches of chemistry / biochemistry. 2.2. Has values and beliefs that are commensurate with the ethics of our Arab society and in line with its laws in force, and is committed to the ethics of scientific research.	interpret in the field of Chemistry and Biochemistry, 2. Enable graduate students to gain the practical and laboratory skills required for experiments in Chemistry-Biochemistry field. 3. Master safe handling techniques of chemicals and biological fluids. 9. Demonstrate knowledge from an integrated point of view of theories, facts, concepts and essentials of chemistry and biochemistry.	order to understand the advanced and contemporary topics of chemistry and biochemistry. B. 2 Analyze, evaluate and interpret qualitative and quantitative scientific data relevant to the various subjects of chemistry and biochemistry. C. 2. Handle chemical materials safely and conduct risk assessments taking into account their physical and chemical properties to avoid hazards associated with their use. D. 2. Identify roles and responsibilities, delegate tasks, and set clear guidelines and performance indicators.	scientific data relevant to the various subjects of chemistry and biochemistry. B3. Evaluate data-processing skills, relating to chemical and biochemical information data C3. Observe a demonstration for chromatography and electrophoresis techniques and use them to separate different chemical compounds C4. Practice the use of laboratory equipment as pipettes, spectrophotometer and centrifuges. D2. Address the community linked problems with considerable attention to the community ethics and traditions. D3. Debate the scientific data in Arabic and English	2304-003; 4704-051; 4707-058; 4215-062; 4235-026; 4216-068; 4247-045; 4218-065; 4248-035; 4218-040; 2301-001; 2403-002; 4707-033; 4233-012; 2304-003; 4244-014; 4225-061; 4215-016; 4705-053; 4706-020; 4706-056; 4706-019; 4705-055; 4706-057; 4216-068; 4707-027; 4703-048; 4708-038; 4248-066; 1001-002; 1001-003; 3122-002; 2402-001; 4702-046; 4702-047; 2203-002; 2403-002; 3124-004; 4707-059; 4703-049; 4707-059; 4703-049; 4707-036; 2504-002; 4224-051; 4235-026; 4235-063; 4243-058; 4243-011; 2201-001; 2111-005; 2201-002; 2203-002.

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
3. Recognize the molecular and chemical basis of the processes that occur in cells and living organisms.	6. Provide with certain skills for using the different biochemical tools to acquire data and to have the ability for analyzing, interpreting and figuring out the results. 4. Develop graduates with the skills of data collection, interpretation and presentation data in English and Arabic. 10. Provide experience of current analytical techniques and practical skills relevant to chemistry-biochemistry and appropriate for employment.	A.3. Exhibit familiarity with the principles and procedures used in chemical analyses as well as in characterization and structural investigation of Compounds. B. 2. Analyze, evaluate and interpret qualitative and quantitative scientific data relevant to the various subjects of chemistry and biochemistry. C.3. Solve problems related to the fields of chemistry and biochemistry using a range of formats and approaches and employ appropriate techniques and tools in accordance with scientific ethics. D. 2. Identify roles and responsibilities, delegate tasks, and set clear guidelines and performance indicators. D. 3. Exhibit the sense of beauty and neatness.	A6. Describe knowledge and comprehension of the theories, concepts and techniques related to aromatic, environmental, nuclear, inorganic and spectroscopic studies of chemistry. A7. Outline the principles of isolation, purification, as well as qualitative and quantitative analysis. B4. Deduce mechanisms and procedures for chemical and biochemical problems based on critical thinking. C2. Perform some chemical tests to identify different carbohydrates, lipids and proteins. C6. Interpret biochemical calculations for normality and molarity. C7. Apply buffer preparation and chemical and biological components determination D 4. Apply problem-solving skills, relating to qualitative and quantitative information.	4707-033; 4233-012; 3124-004; 4224-051; 4215-016; 4215-062; 4246-010; 4216-015; 4703-049; 4703-048; 4228-057; 4218-032; 4248-066; 2201-001; 2203-002; 422-011; 4224-049; 4235-026; 4235-063; 4218-040; 4705-054; 4705-053; 4705-014; 4706-021; 4246-037; 4705-055; 4216-068; 4247-045; 4217-054; 4248-035; 4704-050; 4706-020; 4706-056; 4706-019; 4706-057; 4246-044; 4244-014; 4703-023; 4704-051; 2605-002; 4217-042; 4708-032; 4704-052.

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
4. Recognize the relationship and interactions among chemistry, biochemistry and the environment and abide by the legislations and ethics related to the environment preservation and human health and welfare.	6. Provide with certain skills for using the different biochemical tools to acquire data and to have the ability for analyzing, interpreting and figuring out the results. 7. Provide graduate with skills of quality control processes evaluation, risk management and time organization.	nature and behavior of the functional groups in different types of molecules. B. 2. Analyze, evaluate and interpret qualitative and quantitative scientific data relevant to the various subjects of chemistry and biochemistry. C. 4. Employ standard laboratory instruments, procedures, and techniques used in the chemical and biochemical investigations. D. 4. Think independently and solve problems on scientific basis.	A8. Describe the relationship of chemical and molecular structure of metabolic components with mechanisms of actions, biological activities, concepts of informatics and designing and targeting of biological components. A9. Explain key metabolic reactions involved in the biosynthesis and degradation of biological molecules A10. Understand the basic knowledge of the molecular biosciences, including biochemical processes, genetics, molecular biology and cell biology. B5. Decide the appropriate isolation and purification methods of active substances from natural and synthetic origin C3. Observe a demonstration for chromatography and electrophoresis techniques and use them to separate different chemical compounds C8. Apply spectrophotometer to determine the biological components contents. D5. Investigate the thinking independently, set tasks and solve problems on ethical scientific basis	2114-141; 4708-040; 4707-035; 4705-054; 4705-053; 4705-014; 4705-055; 4707-059; 4708-038; 4708- 032;4248-066; 4706- 020; 4706-056; 4706- 021; 4706-019; 4706- 057; 4708-034; 4707- 030; 4704-052; 2203- 002; 4215-062; 4235- 026; 4235-063;4216- 068; 4247-045; 4218- 065;4248-035;4703-023.
5.1. Analyze the biochemical data to characterize biomolecules and evaluate	2. Demonstrate knowledge from an integrated point of view of theories, facts, concepts and essentials of	A.5. Appreciate the concepts of biodiversity and maintaining of natural resources.	A13. Recall the principles and techniques of compounding, manufacturing,	4702-046; 4702-047; 2403-002; 4708-034; 4707-030; 1001-001; 4707-035; 4704-050;

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
the activity of biochemical processes. 5.2 Collect, analyze, and present data using appropriate formats and techniques and use information technology relevant to the field efficiently.	chemistry and biochemistry. 7. Provide graduate with skills of quality control processes evaluation, risk management and time organization	B. 3. Postulate and deduce mechanisms and procedures to handle scientific problems and choose optimum solutions for chemical and biochemical problems based on critical thinking. C. 5. Apply mathematical and computational tools to analyze and interpret experimental data in terms of theories relevant to chemistry and biochemistry. D. 4. Think independently and solve problems on scientific basis.	biotechnology, and packaging of chemicals products. B6. Generate and adopt the appropriate methods of synthesis, identification, and standardization of active substances from natural and synthetic origins B10. Analyze literature, research skills, scientific thinking and statistics to enhance practice-related activities. C13. Conduct standard laboratory procedures involved in analytical and synthetic work D6. Develop life-long learning and solve the community-linked problems	4704-051; 4244-014; 4246-010; 4216-015; 4247-023; 4228-057; 2502-001; 4708-040; 4706-020; 4706-056; 4235-026; 4707-027; 4707-036; 4703-023; 4243-058; 4224-051; 4246-037; 4246-044; 4218-032; 4248-035.
6. Use modern biotechnological sciences, skills, and computer aids to support the research and uses of chemistry and biochemistry.	4. Provide experience of current analytical techniques and practical skills relevant to chemistry-biochemistry and appropriate for employment.	 A.4. Characterize the chemical nature and behavior of the functional groups in different types of molecules. B. 4. Develop lines of argument and appropriate judgment in accordance with scientific theories and concepts in the area of study. 	A14. Memorize sterilization processes as well as quality control and assurance terms and procedures in the biochemistry and chemistry lab. B7. Generate and adopt the appropriate methods of synthesis, identification, and standardization of active substances from natural and synthetic origins B8. Examine the different mechanisms of transcriptional, posttranscriptional and	4702-046; 4707- 033;4705-055;4702- 047;4217-042; 4218- 032;4215-016; 4215- 062; 4235-026; 4235- 063; 4246-037; 4246- 044; 4708-040; 1001- 002;1001-003;3122- 002;2402-001;2203- 002; 2403-002; 3124-

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
		C. 6. Read, scrutinize, and evaluate the validity and relevance of literature in a critical thinking approach. D. 5. Address the community linked problems with considerable attention to the community ethics and traditions.	translational control of gene expression in prokaryotes and eukaryotes C9. Apply Colorimetric assays to determine lipid, kidney, liver, heart and electrolytes profile. C15. Extract, isolate and purify active substances from different sources D2 Address the community linked problems with considerable attention to the community ethics and traditions	004; 4703-048; 4703- 023; 4243-011; 4247- 023.
7. Apply theories and concepts of mathematics and statistics to understand the underlying mechanisms of the essential chemical and biochemical processes.	5. Participate as a member in team, recognize and respect the team members, and are flexible for adaptation to work conditions 6. Provide with certain skills for using the different biochemical tools to acquire data and to have the ability for analyzing, interpreting and figuring out the results.	A. 5. Appreciate the concepts of biodiversity and maintaining of natural resources. B.5. Analyze and interpret quantitative data relevant to the fields of chemistry and biochemistry in graphs, figures, tables, equations, and other sources of information. C. 4. Employ standard laboratory instruments, procedures, and techniques used in the chemical and biochemical investigations. D.6. Read, scrutinize, and evaluate the validity and relevance of literature in a critical thinking approach.	A11. Recognize the relevance of biochemistry, molecular biology, immunology, microbiology and toxicology to disease states, diagnosis and therapeutics. A12. Name the principles of public health issues such as laboratory diagnosis of diseases. B9. Recognize signs, symptoms and risk factors that relate to medical or health problems that fall into the scope of practice of other healthcare professionals B11. Contrast the role of oncogenes and tumor suppressor during the normal cell growth and carcinogenesis process C10. Apply the safety precautions in molecular biology labs (includes handling	4702-046; 4704-051; 4705-055; 4216-068; 4707-027; 4707-036; 4703-049; 4703-048; 4708-038; 4703-023; 4704-052; 4708-040; 4707-035; 4705-014; 4706-021; 4707-058; 4707-033; 4705-054; 4708-032; 4248-066; 4702-047; 4235-026; 2201-001; 1001-002; 4203-002; 4224-049; 4246-044; 4247-023; 4707-059; 3121-001; 3122-002; 3123-003; 3124-004.

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
		D. 6. Work in a team effectively, manage time, collaborate and communicate with others positively. D. 7. Deal with property rights legally and ethically.	of samples and chemicals and General Housekeeping). C14. Apply computational tools and packages, to prepare technical reports and to use scientific literature effectively D7 Deal with property rights legally and ethically.	
8. Engage in research teams, especially multidisciplinary teams. participate in quality control and review processes, risk management and time management for job termination.	5. Participate as a member in team, recognize and respect the team members, and are flexible for adaptation to work conditions. 8. Provide graduate with skills and attitude necessary for lifelong and independent learning the ethics related to environment caring and community problems.	A5. Appreciate the concepts of biodiversity and maintaining of natural resources. B6. Construct several related and integrated information to confirm, make evidence and test hypotheses. C7. Consider variations inherent in dealing with biological materials such as sample size, accuracy, precision and calibration. D7. Exhibit the sense of beauty and neatness D8. Acquire self - and lifelong learning.	A15. List the basis of toxicity profiles of drugs/xenobiotic including source identification, symptoms, first aid measures and management. A16. Identify the principles of thermodynamics and quantum mechanics including their applications in chemistry. B12. Interpret immunological and molecular reports. B13. Organize of experimental work in molecular research laboratories. B14. Critically evaluate their own research data and develop new approach to solving their research questions. C11. Apply appropriate method to determine purity and integration of nucleic acid such as spectrophotometric method and agarose electrophoresis. C12. Practice and perform the techniques of molecular biology.	4244-014; 4708-038; 4703-023; 4233-012; 4215-016; 4246-010; 4247-023; 4705-014; 4707-027; 4707-030; 1001-003; 1002-005; 4706-021; 4706-019; 4707-059; 4704-051; 4703-048; 4703-049; 4704-052; 4244-014; 4215-062; 4235-026; 4235-063; 4703-049; 4216-015; 4246-037; 4246-044; 4216-068; 4247-045; 4217-054; 4217-042; 4228-057; 4218-032; 4218-065; 4248-035; 4708-038; 4248-066; 4218-040; 4708-040; 4224-051; 4225-061; 4706-020;

General attributes of graduates	Program aim	NARS	Program ILOS	Course codes
			C16. Develop and assess novel methods of analysis C17. Develop advantageous analytical method over the existing traditional techniques D8 Exhibit the sense of beauty and neatness. D9 Help students to work independently and as a part of a team and learn independently with open-mindedness and critical enquiry and Enhance self-learning skills.	4246-010; 4706-057; 2602-001; 1002-005; 4707-035; 4705-055; 4703-049; 4707-058; 4248-066
